

scV5

CATIA V5 Software Management

scV5 is a solution for the efficient installation and the simple, straightforward updating of CATIA V5 on Windows workstations. Using scV5, you install all required install versions of CATIA V5 on all machines from a central host. The installation or the update is carried out automatically. scV5 includes completely configured packages with CATIA install versions for the most important OEMs. If you need multiple OEM versions, you can install and administer these in parallel on your workstations with scV5.

Further information

- **immediately applicable CATIA installation for different OEMs**
- **fast and automated installation centrally via the net**
- **straightforward administration of multiple install versions**

Automated local installation

CATIA V5 is usually locally installed on Windows workstations to ensure fast performance. Previously, if multiple install versions for different OEMs had to be distributed on the hosts, it was necessary to manually install every single version on every single host. This time consuming procedure becomes unnecessary with scV5. With the scV5 software management, you install all necessary install versions onto your hosts centrally via the net. You can also simultaneously provide multiple hosts with software. In conclusion, scV5 automates the installation in your start tool, configures the license server and sets the CATIA environment. You can manage your CATIA updates in the same comfortable way.

Immediately applicable working platform

A productive CATIA installation is made up of three components: the release itself, the respective service pack and the hot fix. Each OEM uses its own combination from these three installation components for the working platform. scV5 offers software packages that can be installed immediately for the most important CATIA V5 install versions. Specifically for Audi, BMW, Daimler, Ford, Jaguar, Land Rover, Porsche, Volkswagen and Volvo. What's more, further software packages can be added upon request. scV5 installs all of the components required by the respective OEM, including the OEM settings. The result: an immediately applicable CATIA installation for the respective OEM.

Integration into your CATIA start tool

If you like, we can configure scV5 so that the CATIA versions you install with scV5 are automatically integrated into your start tool.

Features

- **configured install packages for different OEMs**
 - with the respective service pack and hot fix
 - including OEM settings
- **management of multiple versions: installation and administration of multiple install versions**
 - including the creation of the CATIA environment file
- **installation/update of the software packages (Multicast compatible)**
 - automated
 - centrally via the net
 - parallel
- **automatic configuration of the licensing mechanism**
- **automatic integration of the installation into a start tool**
